THROAT (Oropharynx/Larynx):
The oropharynx is the area behind the tongue at the very back of the mouth, it connects to the nasopharynx superiorly and the larynx inferiorly. The larynx and oropharynx are separated by the epiglottis. The Larynx is where sound is produced. Vibrations of cartilage and tissue caused by fast-moving air lead to sound, which is formed into speech by the tongue and mouth.

Anatomy Your eustachian tube is
located in the area known as
parapharyngeal space. It runs from
the front wall of the middle ear to
the side wall of the nasopharynx.
In adults, the eustachian tube
slopes downward about 35
degrees; in children, the
eustachian tube only slopes about
10 degrees downward. 1

Throat Exercise ; As weakness of the throat is one of the common causes of snoring, the best natural DIY remedy is to practice throat exercises before sleep. Some ideal ones to try are-Project the lower jaw outer than the upper jaw and count for 20 seconds. Repeat the same by changing the jaws. Use a tongue twister to exercise your tongue.
