Within the last years, empirically based knowledge concerning the psychopathology, etiopathogenesis, and treatment of BPD have significantly improved. Today most researchers postulate pervasive affective dysregulation at the core of borderline symptomatology and see it as the consequence of an interplay between genetic vulnerability, sociobiographic experience, and dysfunctional behavior.

Borderline Psychopathology and its Treatment Gives as much weight to the patient ' s reports of his subjective experience as to his behavior in the transference. What the patient feels – his “ inner emptiness, ” his “ aloneness ” were the spur and the foundation for the theoretical formulations. (417 pp.)
