The computer unlike other inventions is universal; you can use a computer for many tasks: writing, composing music, designing buildings, creating movies, inhabiting virtual worlds, communicating... This popular science history isn't just about technology but introduces the pioneers: Babbage, Turing, Apple's Wozniak and Jobs, Bill Gates, Tim Berners-Lee, Mark Zuckerberg. This story is about people and the changes computers have caused. In the future ubiquitous computing, AI, quantum and molecular computing could even make us immortal. The computer has been a radical invention. In less than a single human life computers are transforming economies and societies like no human invention before.

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

Robert M. Grant combines a highly accessible writing style with a concentration on the fundamentals of value creation and an emphasis on practicality in this leading strategy text. In this new edition, he includes an even greater focus on strategy implementation that reflects the needs of firms to reconcile scale economies with entrepreneurial flexibility, innovation with cost efficiency, and globalization with local responsiveness. This edition also incorporates some of the key strategic issues of today including: post-financial crisis adjustment, the continuing rise of China, India and Brazil, and the increased emphasis on ethics and sustainability. Coverage is also provided on strategy in not-for-profit organizations. Contemporary Strategy Analysis, 8th Edition, is suitable for both MBA and advanced undergraduate students. It has been adopted by leading business schools all across the world.

This Third Edition is the first English-language edition of the award-winning Meilensteine der Rechentechnik; illustrated in full color throughout in two volumes. The Third Edition is devoted to both analog and digital computing devices, as well as the world's most magnificent historical automatons and select scientific instruments (employed in astronomy, surveying, time measurement, etc.). It also features detailed instructions for analog and digital mechanical calculating machines and instruments, and is the only such historical book with comprehensive technical glossaries of terms not found in print or in online

dictionaries. The book also includes a very extensive bibliography based on the literature of numerous countries around the world. Meticulously researched, the author conducted a worldwide survey of science, technology and art museums with their main holdings of analog and digital calculating and computing machines and devices, historical automatons and selected scientific instruments in order to describe a broad range of masterful technical achievements. Also covering the history of mathematics and computer science, this work documents the cultural heritage of technology as well.

In Part I, Prof. Targowski takes us through the evolution of modern computing and information systems. While much of this material is familiar to those of us who have lived through these developments, it would definitely not be familiar to our children or our students. He also introduces a perspective that I found both refreshing and useful: looking at the evolution on a country by country basis. For those of us who live in the U.S., it is all too easy to imagine that evolution to be a purely local phenomenon. I found my appreciation of the truly global nature of computing expanding as he walked me through each country's contributions. In Parts II and III, constituting nearly half of the book, Targowski provides what I would describe as an in-depth case study of the challenges and successes of informatics in Poland. As he tells each story—many of which involved him personally—the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce

innovations in IT. Even after Poland left the orbit of the former Soviet Union, the remaining vestiges of the old way of thinking remained a major impediment to progress. Being right and being rigorous were far less important than being in tune with the “approved” ways of thinking. There are important lessons to be learned here, particularly as we try to project how IT will evolve in rapidly developing economies such as China. But, from my experience, they apply equally well to western academia, where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged. In Part IV, Targowski presents a bold, forward-looking synthesis of informatics and informing science in the future. Building upon articles recently published in *Informing Science: The International Journal of an Emerging Transdiscipline*, he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee. He then considers how these trends will necessarily force us to rethink how we develop and apply IT. He does not steer away from the controversial. But he also provides cogent arguments for all his predictions and recommendations.

Electronics is an ever-changing field with an entrepreneurial spirit and a rich history, populated by some of the world's most famous companies and personalities. The Business of Electronics details the field's complex ecosystem in all its trials and tribulations. It looks at companies such as Apple, IBM, Samsung, and Nokia, as well as now-extinct companies such as Honeywell Bull (France) and Sinclair Computers (UK) that contributed to technology and business. Sethi shows us how a handful of US companies led the charge in designing equipment that could make millions of small, reliable components; how Nokia started in the timber business; the history of inventors like J.C. Bose, a pioneer in radio communication (who inadvertently made Guglielmo Marconi famous); and why there are numerous companies and creators that never made it or that we have never heard of. This all-encompassing book not only explores the vibrant history of electronics, it uses case studies to examine the companies and people that made history and explain how we ended up where we are today.
