Now a classic, this book was hailed upon its original publication in 1959 as "An event to be acclaimed . . . a book of genuine brilliance on Freud's cultural importance . . . a permanently valuable contribution to the human sciences." "Alastair MacIntyre, Manchester Guardian "This remarkably subtle and substantial book, with its nicely ordered sequences of skilled dissections and refined appraisals, is one of those rare products of profound analytic thought. . . . The author weighs each major article of the psychoanalytic canon in the scales of his sensitive understanding, then gives a superbly balanced judgement." Henry A. Murray, American Sociological Review "Rieff's tremendous scholarship and rich reflections fill his pages with memorable treasures." Robert W. White, Scientific American "Philip Rieff's book is a brilliant and beautifully reasoned example of what Freud's influence has really been: an increasing intellectual vigilance about human nature. . . . What the analyst does for the patient/present the terms for his new choices as a human being! Mr. Rieff does in respect to the cultural significance of Freudianism. His style has the same closeness, the same undertone of hypertense alertness. Again and again he makes brilliant points." Alfred Kazin, The Reporter

In The Interpretation of Investment Treaties, Trinh Hai Yen analyzes arbitral neglect or misapplication of international rules on treaty interpretation in investor-state arbitrations and proposes both adjudicative and legislative solutions.

In this seminal work, published by the C.I.A. itself, produced by Intelligence veteran Richards Heuer discusses three pivotal points. First, human minds are ill-equipped ("poorly wired") to cope effectively with both inherent and induced uncertainty. Second, increased knowledge of our inherent biases tends to be of little assistance to the analyst. And lastly, tools and techniques that apply higher levels of critical thinking can substantially improve analysis on complex problems.

Translation and Conflict demonstrates that translators and interpreters participate in circulating as well as resisting the narratives that create the intellectual and moral environment for violent conflict. Drawing on narrative theory and using numerous examples from historical and contemporary conflicts, the author provides an original and coherent model of analysis that pays equal attention to micro and macro aspects of the circulation of narratives in translation, to translation and interpreting, and to questions of dominance and resistance. The study is particularly significant at this juncture of history, with the increased interest in the positioning of translators in politically sensitive contexts, the growing concern with translators' and interpreters' divided loyalties in settings such as Guantanamo, Iraq, Kosovo, and other arenas of conflict, and the emergence of several activist communities of translators and interpreters with highly politicized agendas of their own, including Babels, Translators for Peace, Tlaxcala and ECOS. Including further reading suggestions at the end of each chapter, Translation and Conflict will be of interest to students of translation, intercultural studies and sociology as well as the reader interested in the study of social and political movements.

Offering a new interpretation of Aristotle's Analytics (the Prior and Posterior Analytics) as a unified whole, Patrick H. Byrne argues that a non-deductive form of ancient mathematical analysis influenced Aristotle's thinking. Reading the Analytics with this perspective in mind sheds new light on Aristotle's theories of the syllogism, demonstration and the principles of science. The book begins with a brief survey of ancient geometrical analysis and an investigation of Aristotle's uses of the Greek term, *analuein*. Byrne argues that "to loose up" or solve--rather than to reduce or break up--is the principal meaning which best characterizes Aristotle's Analytics. Extending this line of reasoning, he argues that for Aristotle scientific analysis commonly begins with knowledge of a "mere fact" (a conclusion) and seeks a rigorous demonstration which expresses knowledge of the "reasoned fact." Moreover, genuine analysis of a fact into a reasoned fact cannot be accomplished unless the premises of demonstrations are themselves reasoned facts. Hence the processes which yield the immediate principles (especially definitions) are next investigated through detailed examinations of key examples which Aristotle provides.
