Functional appliances (e.g. the Twin Block) are a popular type of reducing the projection of the front teeth in patients who are growing. What is a functional appliance? A functional appliance is a type of brace to correct a "Class II" problem; Class II problems are a group of bite problems where the top teeth bite in front of the lower teeth.

The Monobloc was developed by Pierre Robin (surgeon) in 1902 and is considered to be one of the first functional appliances in Orthodontics. The Monobloc was a modification of Ottolengui's removable plate. In 1908, Viggo Andersen developed the Activator appliance. This was the first functional appliance to be widely accepted, especially in Europe.
