World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and

its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future--one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Special emphasis is given to the dramatic social, political, and economic effects of industrialization including its ill effects on family life and the birth of socialism. Challenging map exercises and provocative review questions encourage meaningful reflection and historical analysis. Tests and answer keys included.

"This remarkable book looks at hundreds of autobiographies penned between 1760 and 1900 to offer an intimate firsthand account of how the Industrial Revolution was experienced by the working class. The Industrial Revolution brought not simply misery and poverty. On the contrary, Griffin shows how it raised incomes, improved literacy, and offered exciting opportunities for political action. For many, this was a period of new, and much valued, sexual and cultural freedom. This rich personal account focuses on the social impact of the Industrial Revolution, rather than its

economic and political histories. In the tradition of best-selling books by Liza Picard, Judith Flanders, and Jerry White, Griffin gets under the skin of the period and creates a cast of colorful characters, including factory workers, miners, shoemakers, carpenters, servants, and farm laborers"--

A mysterious and tremendous thing comes to reveal itself in the course of the lifetime of an earthly human. So mysteriously confronted by it, the earthly human becomes awed by this compelling human attribute.
