Financial Planning is meant for lay investors, financial planners and students pursuing courses on financial planning. It simplifies financial mathematics to enable an investor map financial goals that she would like to achieve. The book includes solved problems on retirement planning and over 350 questions and answers on time value of money. Besides these, it dwells on mutual funds and other investment products that are currently available. The book also discusses the process of constructing and revising a financial plan on the basis of an investor's financial goals.

This book is designed for two primary audiences - those interested in working in subsistence marketplaces, as well as those interested in applying the lessons learned (in such extreme contexts) to their own contexts, such as in advanced economies or in higher-income segments of developing economies. We aim to reach a diverse audience including practitioners in business, government, and social sectors; and researchers, educators, and students. We develop the notion of bottom-up enterprises learned through practice in extreme, i.e., resource-constrained, settings. Sometimes, the most insightful lessons for all settings come from such discovery. The book begins with a journey of immersion and reflection in the first part, followed by explicit discussions of lessons learned in the second section. In the third and last part, we broaden the dialogue to include bottom-up applications to a variety of settings and operations. Even for those not working in subsistence marketplaces, there is significant value in understanding the implications of these bottom-up approaches to their own efforts. We illustrate a number of situations where our approaches have had impact in other domains.Finally, our sequencing here is bottom-up as well, beginning with a deep understanding of subsistence marketplaces, followed by the design of solutions and enterprise plans for them. After this, the discussion turns to lessons in running a bottom-up enterprise before moving on to the application of these lessons in a variety of contexts.There is an irony in writing a book about being bottom-up. The very act of writing about it is, in a sense, top-down. And so goes the dance between the bottom-up and the top-down that is detailed in this journey.

Provides a clear and detailed analysis of the concepts, theories and techniques used in international finance management.

The entrance of fast-paced technology into the workplace necessitates a proper re-look into performance management whether it is in education, marketing, finance, or information technology. Maintaining happiness and wellbeing despite the pressure of performance at work is a serious challenge. Happiness is not only important for work performance, but also for the physical and mental health of human beings. This book provides different concepts, theories, and methods to better understand the relationship between performance and happiness in the context of work in this information and technology era. Various domains of performance management are covered in the context of management and information technology, including topics related to the performance of digital wallets from the customer's point of view; evaluating the sustainability of micro-finance institutions; challenges in employee retention; problems the workforce faces in IT and management; dimensions of happiness for women in the workplace; the role of happiness in building a meaningful life; and the quality of work life. The findings are useful for practical applications in management and business scenarios. They also provide informative insights for researchers, academicians, industry professionals, and scholars.

This book addresses a broad range of problems commonly encountered in the fields of financial analysis, logistics and supply chain management, such as the use of big data analytics in the banking sector. Divided into twenty chapters, some of the contemporary topics discussed in the book are co-operative/non-cooperative supply chain models for imperfect quality items with trade-credit financing; a non-dominated sorting water cycle algorithm for the cardinality constrained portfolio problem; and determining initial, basic and feasible solutions for transportation problems by means of the [supply demand reparation method] and [continuous allocation method.]] In addition, the book delves into a comparison study on exponential smoothing and the Arima model for fuel prices; optimal policy for Weibull distributed deteriorating items varying with ramp type demand rate and shortages; an inventory model with shortages and deterioration for three different demand rates; outlier labeling methods for medical data; a garbage disposal plant as a validated model of a fault-tolerant system; and the design of a [least cost ration formulation application for cattle!]; a preservation technology model for deteriorating items with advertisement dependent demand and trade credit; a time series model for stock price forecasting in India; and asset pricing using capital market curves. The book offers a valuable asset for all researchers and industry practitioners working in these areas, giving them a feel for the latest developments and encouraging them to pursue further research in this direction.

This volume from the Policy Studies Organization provides critical, theoretical, and empirical perspectives on international organizations, the policy implications of these organizations, and the possible roles such agencies can play in international environmental policy. With contributions from a wide range of scholars, the work takes up such topical issues as the Rio Agenda of 1992 and its implementation; the role the European Union might play in environmental policy; the place of environmentalism in the development strategies and tactics of organizations such as the World Bank; and the development of international environmental law.
