Mouse Development - 1st Edition

Abstract. The mammalian preimplantation embryo is a highly tractable, self-organizing developmental system in which three cell types are consistently specified without the need for maternal factors or

Abstract. During vertebrate development, brain patterning and head morphogenesis are tightly coordinated. In this paper, we study these processes in the mouse mutant Fused toes ( Ft ), which presents severe head defects at midgestation. The Ft line carries a 1.6-Mb deletion on chromosome 8.
