It's hard not to run into Graham Hutton's work when reading about functional programming, so reading a book on Haskell written by him sounded like a good opportunity to learn from a real expert. It turned out to be a good choice - this is definitely the best Haskell book I read so far.

Graham Hutton Professor of Computer Science at the University of Nottingham. Co-leader of the Functional Programming Lab. My research interests are in the mathematics of program construction. The aim of this area is to develop simple but powerful techniques for writing and reasoning about computer programs, by recognising and exploiting their underlying mathematical structure.

Thanks for the tip. I reviewed the table of contents and sample chapters from several Haskell books including HPFFP. The structure and writing style from Programming in Haskell seemed most ideal for me. The only other tech books that I have appreciated this much before are K&R and Eloquent Ruby.
