around doors and windows. Save on heating costs and stay comfortable in cold weather by dressing to retain body heat. Layer your clothing: wear lightweight basic garments, such as a shirt or blouse or short-sleeved sweater, covered by heavier garments, such as a Saving Energy sweater vest, and topped with a warm jacket or sweater jacket. If you become too warm you can adjust your own body thermostat by taking off a layer. To speed the installation of weatherstripping, try stapling instead of nailing it. Keeping your home well caulked is one of the best ways to save energy. When you caulk, make sure joints are thoroughly dry-you can dry deep crevices with a cloth stretched over the blade of a putty knife, or with a blast of hot air from a hair dryer. When caulking several joints, start with the smallest joint and recut the tube's nozzle as necessary for successively larger joints. A room will stay warmer in cold weather if curtains fit tightly against the window's frame so that warm room air doesn't move across the cold window surface. A fixed valance at the top and sides of the curtains will help, and so will weighting or fastening the curtains at the bottom. Installing a window greenhouse in one or more of your house's south-facing windows is an unusual (and effective) way to gain extra heat for your home in winter, to reduce the loss of heat to the outdoors in the evening, and, of course, to provide an encouraging environment for plants.

Provides a summary of small changes that can be made in your home to give you significant reductions in energy costs.

This book helps homeowners and renters sort through the bewildering array of new and old technology. In no-nonsense prose it explains how to save money and the environment-how to improve energy efficiency and your standard of living.

The need for security and comfort must have motivated prehistoric man to form his own cave dwelling. Since then, the concept of a house has gone through tremendous changes from the flawless houses of ancient civilizations to the modern-day high-rise settlements. Although modern homes provide comfort and luxury besides supporting the growing population well, they also lead to excess power consumption due to lighting in common areas, operation of lifts, among others. The Story of House talks about the evolution of homes, besides highlighting the dark side of luxury housing. At the same time, it offers smart green solutions to make our homes energy-efficient. Other titles in the series The Story of
