The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus immediately qualify for benefits. In this report, the IOM makes several recommendations for improving SSA's capacity to determine disability benefits more quickly and efficiently using the Listings.

More than 7 million recipients of Social Security benefits have a representative payee—a person or an organization—to receive or manage their benefits. These payees manage Old Age, Survivors and Disability Insurance funds for retirees, surviving spouses, children, and the disabled, and they manage Supplemental Security Income payments to disabled, blind, or elderly people with limited income and resources. More than half of the beneficiaries with a representative payee are minor children; the rest are adults, often elderly, whose mental or physical incapacity prevents them from acting on their own behalf, and people who have been deemed incapable under state guardianship laws. The funds are managed through the Representative Payee Program of the Social Security Administration (SSA). The funds total almost \$4 billion a month, and there are more than 5.3 million representative payees. In 2004 Congress required the commissioner of the SSA to conduct a one-time survey to determine how payments to individual and organizational representative payees are being managed and used on behalf of the beneficiaries.1 To carry out this work, the SSA requested a study by the National Academies, which appointed the Committee on Social Security Representative Payees. This report is the result of that study. Improving the Social Security Representative Payee Program: Serving Beneficiaries and Minimizing Misuse (1) assesses the extent to which representative payees are not performing their duties in accordance with SSA standards for representative payee conduct, (2) explains whether the representative payment policies are practical and appropriate, (3) identifies the types of representative payees that have the highest risk of misuse of benefits, and (4) finds ways to reduce the risk of misuse of benefits and ways to better protect beneficiaries.

draft Social Security (Incapacity for Work) (General) Amendment Regulations 2003 : Report by the Social Security Advisory Committee under section 174 (1) of the Social Security Administration Act 1992 and the statement withdrawing the proposed regulations

The U.S. Social Security Administration (SSA) provides benefits to disabled adults and children, offering vital financial support to more than 19 million disabled Americans. Of that group, approximately 5.5 million have been deemed "incapable" by virtue of youth or mental or physical impairment - incapable of managing or directing the management of their benefits. Hence, a representative payee has been appointed to receive and disburse SSA payments for these beneficiaries to ensure that their basic needs for shelter, food, and clothing are met. Periodically, however, concerns have been expressed about the accuracy of the process by which SSA determines whether beneficiaries are capable of managing their benefits, with some evidence suggesting that underdetection of incapable recipients may be a particular problem. The importance of creating as accurate a process as possible for incapability determinations is underscored by the consequences of incorrectly identifying recipients either as incapable when they can manage their benefits or as capable when they cannot. Failure to identify beneficiaries who are incapable of managing their funds means abandoning a vulnerable population to potential homelessness, hunger, and disease. Informing Social Security's Process for Financial Capability Determination considers capability determination processes used by other similar benefit programs, abilities required to manage, and direct the management of, benefits, and effective methods and measures for assessing capability. This report evaluates SSA's capability determination process for adult beneficiaries and provides recommendations for improving the accuracy and efficiency of the agency's policy and procedures for making these determinations.

Derived from the renowned multi-volume International Encyclopaedia of Laws, this book describes the social security regime in Finland. It conveys a clear working knowledge of the legal mechanics affecting health care, employment injuries and occupational diseases, incapacity to work, pensions, survivors' benefits, unemployment benefits and services, and family benefits. The analysis covers the field of application, conditions for entitlement, calculation of benefits, financing, the institutional framework, and relevant law enforcement and controls. Allowances for retirees, employees, public sector workers, the self-employed, and the handicapped are all clearly explained, along with full details of claims, adjudication procedures, and appeals. Succinct yet eminently practical, the book will be a valuable resource for lawyers handling social security matters in Finland. It will be of practical utility to those both in public service and private practice called on to develop and to apply social security law and policy, and of special interest as a contribution to the comparative study of social security systems.

Millions of Americans experience some degree of hearing loss. The Social Security Administration (SSA) operates programs that provide cash disability benefits to people with permanent impairments like hearing loss. If they can show that their impairments meet stringent SSA criteria and their earnings are below an SSA threshold, The National Research Council convened an expert committee at the request of the SSA to study the issues related to disability determination for people with hearing loss. This volume is the product of that study. Hearing Loss: Determining Eligibility for Social Security Benefits reviews current knowledge about hearing loss and its measurement and treatment, and provides an evaluation of the strengths and weaknesses of the current processes and criteria. It recommends changes to strengthen the disability determination process and ensure its reliability and fairness. The book addresses criteria for selection of pure tone and speech tests, guidelines for test administration, testing of hearing in noise, special issues related to testing children, and the difficulty of predicting work capacity from clinical hearing test results. It should be useful to audiologists, otolaryngologists, disability advocates, and others who are concerned with people who have hearing loss.

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.
