Second, the boom-bust in house prices explains half of the corresponding swings in nondurable expenditures through a wealth effect. Third, a large-scale debt forgiveness program would have done little to temper the collapse of house prices and expenditures but would have dramatically reduced foreclosures and induced a small, but persistent, increase in consumption during the recovery.

The boom and bust in the US housing market has had enormous implications for the world economy as a whole so it is useful to have a grasp of what caused it, how we can avoid doing it again and how not to respond. The bust is easy to explain- house prices rises vastly exceeded gains in income, population or productivity so could not be sustained.

The Office for Budget Responsibility forecasts a 12% cumulative fall in house prices by the end of next year. If it is anywhere close to accurate, that makes this summer the boom before a big bust....

[The Guardian view on house prices: a return to boom and bust](#)

We build a model of the U.S. economy with multiple aggregate shocks (income, housing finance conditions, and beliefs about future housing demand) that generate fluctuations in equilibrium house prices. Through a series of counterfactual experiments, we study the housing boom and bust around the Great Recession and obtain three main results.
