When the economy was booming and dot-coms were flying high, venture capitalists were admired as impresarios of innovation. Then the market tanked, start-ups fizzled, and those same deal-makers were rebuked as predators out for a quick score. So which portrayal is accurate? Where is this much-hyped industry heading? And what will it mean for the future of innovation in the global economy? In this definitive book, industry experts Paul Gompers and Josh Lerner provide the first cool-headed explanation of the venture capital industry and the role it plays in our economy. They underscore that, regardless of the economic conditions, innovation is incredibly difficult to finance, take to market, and translate into value. While venture capital has evolved to address these problems-the industry has fueled innovation, economic growth, and wealth creation for decades-features of the venture industry have left it vulnerable to boom-and-bust cycles. In the near future, say the authors, the industry must transform dramatically, with important implications for industry players and the entrepreneurs and organizations they serve. Drawing from compelling research and industry "war stories," Gompers and Lerner present a series of practical frameworks for understanding the relationships among venture capital, innovation, and entrepreneurial success. They demystify how the venture capital world operates, and outline the opportunities and obstacles faced by all players in this evolving arena. They explore: · The problems entrepreneurs encounter in securing financing, and how the venture capital model can help innovators to resolve them · How venture capitalists can effectively pursue promising opportunities while building a sustainable franchise · How corporations, nonprofits, and government institutions can harness the power-and avoid the pitfalls-of the venture capital model when applying it in their own sectors Whether the industry is enjoying an incredible growth spurt or weathering an economic slowdown, readers will find this book an immensely practical guide to leveraging the venture capital model to turn innovation into value. Paul A. Gompers is a Professor of Business Administration and a Director of Research at Harvard Business School.Josh Lerner is a Professor of Business Administration at Harvard Business School. Both authors live in the Boston area.

The sweeping story of the world's first financial crisis: ¶an astounding episode from the early days of financial markets that to this day continues to intrigue and perplex historians . . . narrative history at its best, lively and fresh with new insights¶ (Liaquat Ahamed, Pulitzer Prize¶winning author of Lords of Finance) A Financial Times Economics Book of the Year ¶ Longlisted for the Financial Times/McKinsey Business Book of the Year Award In the heart of the Scientific Revolution, when new theories promised to explain the affairs of the universe, Britain was broke, facing a mountain of debt accumulated in war after war it could not afford. But that same Scientific Revolution¶the kind of thinking that helped Isaac Newton solve the mysteries of the cosmos¶would soon lead clever, if not always scrupulous, men to try to figure a way out of Britain's financial troubles. Enter the upstart leaders of the South Sea Company. In 1719, they laid out a grand plan to swap citizens's shares of the nation's debt for company stock, removing the burden from the state and making South Sea's directors a fortune in the process. Everybody would win. The king's ministers took the bait¶and everybody did win. Far too much, far too fast. The following crash came suddenly in a rush of scandal, jail, suicide, and ruin. But thanks to Britain's leader, Robert Walpole, the kingdom found its way through to emerge with the first truly modern, reliable, and stable financial exchange. Thomas Levenson's Money for Nothing tells the unbelievable story of the South Sea Bubble with all the exuberance, folly, and the catastrophe of an event whose impact can still be felt today.

A project book for the would-be inventor with activities, a list of "contraptions" in need of invention, and the stories behind thirty-six existing inventions.

Excerpt from How to Make Money by Invention There are two classes of persons to whom these pages may afford information and to whom they are chiefly addressed, viz., the person who for the first time conceives that he has made an invention and who is actually desirous of benefiting himself thereby; and the patentee who is anxious to render his newly-acquired privilege profitable. When a man has made what he considers to be a discovery or invention, he intuitively feels that to derive any profit from it, he must secure a patent for it; but there his acquaintance with the subject ends - commonly he is at a loss to know what course to pursue. To solve the perplexities, he probably consults the best informed among his friends; and when, as generally happens, the most conflicting and contradictory opinions are given, he ends by taking his own course, which is not always the best under the circumstances. Now, the success of a patent, like that of a book, depends much on the manner in which it is presented to public notice. How much do you really know about money? Everyone uses it, but few know how it really works. Most books about money focus on specific aspects. This book breaks through the usual silos to present money as a broad social technology that serves the current needs of society. It reviews the latest developments in financial technology including cryptocurrency, blockchain, and the prospect of a cashless future; and clears up many misconceptions in the process. Starting with a very brief history, the authors provide insights on how money is made; why money has value and what can change its value; how central banks, treasuries, foreign exchange, lending, and blockchain work; why you may be trading against robots; and privacy and security issues in an increasingly cashless society that will change our lives. While written for a broad audience, this book is also essential reading for students entering courses in the area of business finance, or money and banking.
