At present, human society is facing a health care crisis that is affecting patients worldwide. In the United States, it is generally believed that the major problem is lack of affordable access to health care (i.e. health insurance). This book takes an unprecedented approach to address this issue by proposing that the major problem is not lack of affordable access to health care per se, but lack of access to better, safer, and more affordable medicines. The latter problem is present not only in the United States and the developing world but also in countries with socialized health care systems, such as Europe and the rest of the industrialized world. This book provides a comparative analysis of the health care systems throughout the world and also examines the biotechnology and pharmaceutical industries. Examines the health care structure of the United States, Europe, and the third world, both separately and comparatively Offers primary source insight through in-depth interviews with pharmaceutical and health care industry leaders from around the world Carefully explains, in clear terms, the intricacies of the health care and pharmaceutical system and how these intricacies have led to the current crisis Offers concrete, comprehensive solutions to the health care crisis

By 2030, the world will be short of approximately 15 million health workers - a fifth of the workforce needed to keep healthcare systems going. Global healthcare leader and award-winning author, Dr Mark Britnell, uses his unique insights from advising governments, executives, and clinicians in more than 70 countries, to present solutions to this impending crisis. Human: Solving the Global Workforce Crisis in Healthcare, calls for a reframing of the global debate about health and national wealth, and invites us to deal with this problem in new and adaptive ways that drive economic and human prosperity. Harnessing technology, it asks us to reimagine new models of care and levels of workforce agility. Drawing on experiences ranging from the world's most advanced hospitals to revolutionary new approaches in India and Africa, Dr Mark Britnell makes it clear what works - and what does not. Short and concise, this book gives a truly global perspective on the fundamental workforce issues facing health systems today.

America's Health Care Crisis Solved highlights the major pitfalls of our current health care system and shows why, without changes, health care costs will soon demolish the American economy as well as the opportunity to receive quality care. However, contrary to the increasingly popular idea of a government health plan, the alternative presented by authors J. Patrick Rooney and Dan Perrin brings the self-interest of you, the American consumer, into the equation.

Subtitle in pre-publication: Curing our healthcare crisis.

In Crisis of Abundance: Rethinking How We Pay for Health Care, economist Arnold King warns that no health care system is perfect. Under the status quo, Americans are not getting maximum value per dollar spent. A government solution is likely to require rationing to a degree unacceptable to many Americans. However, a market-oriented approach would require consumers to take greater personal responsibility for health care decisions and expenses. King outlines an approach for increased consumer responsibility, with fewer expenses paid by third parties.

Surprisingly, America ranks 54 worldwide in access to health care. Solving the American Health Care Crisis lays open the issues, challenges Americans to think for themselves, and reveals how learning from other countries can help to create, truly, the best health care system in the world. In the span of his career as an international businessman and entrepreneur, Umang Malhotra has voyaged through nearly eighty countries and he shares his vast knowledge of health care in other nations. In a commonsense book aimed at the public and policymakers alike, he provides a fresh, unbiased view of the flaws inherent in the American health care system while examining how other affluent nations manage to provide quality universal health care coverage for half the cost per person. After the death of his best friend, who did not have American health insurance when he fell ill while visiting the United States, Malhotra wondered why the richest country in the world treats health care as a privilege, rather than as a basic right, unlike other industrialized nations. He reveals how other countries approach health care while examining the critical economic, social, and political issues that America must resolve, in the belief that we can only make progress when the average person understands, fully, the real issues behind the crisis. The book presents compelling solutions for an affordable, high quality, and accessible, universal system while answering key questions and asking some very pointed ones in return. The reader is left well armed to think the issue through.

An examination of the global economic crisis from the perspective of care Valuing care and care work does not simply mean attributing care work more monetary value. To really achieve change, we must go further. In this groundbreaking book, Emma Dowling charts the multi-faceted nature of care in the modern world, from the mantras of self-care and what they tell us about our anxieties, to the state of the social care system. She examines the relations of power that play profitability and care off in against one another in a myriad of ways, exposing the devastating impact of financialisation and austerity. As the world becomes seemingly more uncaring, the calls for people to be more compassionate and empathetic towards one another—in short, to care more—become ever-more vocal. The Care Crisis challenges the idea that people ever stopped caring, but also that the deep and multi-faceted crises of our time will be solved by a simply (re)instilling the virtues of empathy. There is no easy fix. The Care Crisis enquires into the ways in which the continued off-loading of the cost of care onto the shoulders of underpaid and unpaid realms of society, untangling how this off-loading combines with commodification, marketisation and financialisation to produce the mess we are living in. The Care Crisis charts the current experiments in short-term fixes to the care crisis that are taking place within Britain, with austerity as the backdrop. It maps the economy of abandonment, raising the question: to whom care is afforded? And what would it mean to seriously value care?

Rates of heart disease, cancer, diabetes, and other noncommunicable diseases (NCDs) in low- and middle-income countries are increasing faster, in younger people, and with worse outcomes than in wealthier countries. In 2013 alone, NCDs killed eight million people before their sixtieth birthdays in developing countries. A new CFR-sponsored Independent Task Force report and accompanying interactive look at the factors behind this epidemic and the ways the United States can best fight it.

Dramatically recounts the causes and cascading effects of American insourcing of foreign healthcare workers
