If you have a computer which has the Unix operating system installed in it, then you simply need to turn on the system to make it live. As soon as you turn on the system, it starts booting up and finally it prompts you to log into the system, which is an activity to log into the system and use it for your day-to-day activities.

Unix / Linux - Getting Started - Tutorialspoint

Systems programming is a special area of programming on UNIX machines. Please note that Systems programming is not limited to UNIX machines. Most commands that have to do with System Administration tasks such as disk formatting, network interface configuration, module loading, kernel performance tracking, and so on, are implemented using the techniques of Systems Programming.

The Unix system is composed of several components that were originally packaged together. By including the development environment, libraries, documents and the portable, modifiable source code for all of these components, in addition to the kernel of an operating system, Unix was a self-contained software system. This was one of the key reasons it emerged as an important teaching and learning ...
