~~711 DISSOLUTION – USP~~

Dissolution testing measures the extent and rate of solution formation from a dosage form, such as tablet, capsule, ointment, etc. The dissolution of a drug is important for its bioavailability and therapeutic effectiveness. Dissolution and drug release are terms used interchangeably. To properly evaluate the dissolution of drug products, it is critical for procedures to be standardized.

conditions. The dissolution test in a USP drug product monograph helps evaluate the performance of a drug product (article) and indicates when the drug product performs in a substandard fashion. Although passing the test does not definitively demonstrate bioavailability of the sample or bioequivalence to other products, failure is a cause for concern.

~~Dissolution testing~~—Wikipedia

Dissolution test is done using 6 units or dosage forms. These dosages forms are run for the specified time period, sampled and analyzed for the dissolved amount of active ingredient in percentage. This is the first stage of the dissolution and known as S1 Stage. In S1 stage dissolved amount of each unit should not be less than $Q+5\%$.

The dissolution test conducted with this apparatus should be conducted in the best sink conditions available. The closed system, on the other hand, is where the dissolution medium is pumped into the circle but not replaced by a fresh medium. It is normally used for drugs with a low dosage and the test is conducted in small volumes.
