This is the eBook version of the printed book. It is commonly believed that the computer-based systems most organizations rely on to support their businesses are not very smart. Many of the business decisions these companies make tend to be hidden in systems that make poor decisions, or don't make them at all. Further, most systems aren't configured to learn from the past and therefore struggle to keep up with the pace of change. While many organizations believe the answer is to implement newer, "intelligent" systems, the fact is that much of today's existing technology has the potential to be "smart enough" to make a big difference to an organization's business. This digital Short Cut lays out a cry for systems that are smart enough to help companies survive and thrive in the world as it is today. Showing how the neglect of operational decisions prevents effective implementation of strategy and describing the characteristics of effective operational decision-making, the Short Cut establishes the role of operational decisions. The characteristics of the smart enough systems modern business needs are explained, and the absolute requirement for a new approach is outlined. This Short Cut is a reproduction of the " Smart Enough Systems Manifesto " and " Why You Need Smart Enough Systems " chapters from the book. This Short Cut should be of interest to software and business professionals. In particular, it will be of value to those managing information systems and application development projects in defining the goals they should have in building better systems, and to business owners who are frustrated by their current systems but cannot articulate how or why to change things. " Automated decisions systems are probably already being used in your industry, and they will undoubtedly grow in importance. If your business needs to make quick, accurate decisions on an industrialized scale, you need to read this book. " Thomas H. Davenport, Professor, Babson College, Author of Competing on Analytics The computer-based systems most organizations rely on to support their businesses are not very smart. Many of the business decisions these companies make tend to be hidden in systems that make poor decisions, or don ' t make them at all. Further, most systems struggle to keep up with the pace of change. The answer is not to implement newer, " intelligent " systems. The fact is that much of today ' s existing technology has the potential to be " smart enough " to make a big difference to an organization ' s business. This book tells you how. Although the business context and underlying principles are explained in a nontechnical manner, the book also contains how-to guidance for more technical readers. The book ' s companion site,

Additional Praise for Smart (Enough) Systems “ James Taylor and Neil Raden are on to something important in this book—the tremendous value of improving the large number of routine decisions that are made in organizations every day. ” Dr. Hugh J. Watson, Chair of Business Administration, University of Georgia “ This is a very important book. It lays out the agenda for business technology in the new century—nothing less than how to reorganize every aspect of how a company treats its customers. ” David Raab, President, ClientXClient “ This book is an important contribution to business productivity because it covers the opportunity from both the business executive ’ s and technologist ’ s perspective. This should be on every operational executive ’ s and every CIO ’ s list of essential reading. ” John Parkinson, Former CTO, Capgemini, North American Region “ This book shows how to use proven technology to make business processes smarter. It clearly makes the case that organizations need to optimize their operational decisions. It is a must-have reference for process professionals throughout your organization. ” Jim Sinur, Chief Strategy Officer, Global 360, Inc.

This book explores the many ways in which the obsession with “ being smart ” distorts the life of a typical college or university, and how this obsession leads to a higher education that shortchanges the majority of students, and by extension, our society ’ s need for an educated population. The author calls on his colleagues in higher education to return the focus to the true mission of developing the potential of each student: However “ smart ” they are when they get to college, both the student and the college should be able to show what they learned while there. Unfortunately, colleges and universities have embraced two very narrow definitions of smartness: the course grade and especially the standardized test. A large body of research shows that it will be very difficult for colleges to fulfill their stated mission unless they substantially broaden their conception to include student qualities such as leadership, social responsibility, honesty, empathy, and citizenship. Specifically, the book grapples with issues such as the following: • Why America ’ s 3,000-plus colleges and universities have evolved into a hierarchical pecking order, where institutions compete with each other to recruit “ smart ” students, and where a handful of elite institutions at the top of the pecking order enroll the “ smartest ” students. • Why higher education favors its smartest students to the point where the “ not so smart ” students get second-class treatment. • Why so many colleges find it difficult to make good on their commitment to affirmative action and “ equality of opportunity. ” • Why college faculties tend to value being smart more than developing students ’ smartness (i.e., teaching and learning).

Why technology is not an end in itself, and how cities can be “ smart enough, ” using technology to promote democracy and equity. Smart cities, where technology is used to solve every problem, are hailed as futuristic urban utopias. We are promised that apps, algorithms, and artificial intelligence will relieve congestion, restore democracy, prevent crime, and improve public services. In The Smart Enough City, Ben Green warns against seeing the city only through the lens of technology; taking an exclusively technical view of urban life will lead to cities that appear smart but under the surface are rife with injustice and inequality. He proposes instead that cities strive to be “ smart enough ” : to embrace technology as a powerful tool when used in conjunction with other forms of social change—but not to value technology as an end in itself. In a technology-centric smart city, self-driving cars have the run of downtown and force out pedestrians, civic engagement is limited to requesting services through an app, police use algorithms to justify and perpetuate racist practices, and governments and private companies surveil public space to control behavior. Green describes smart city efforts gone wrong

but also smart enough alternatives, attainable with the help of technology but not reducible to technology: a livable city, a democratic city, a just city, a responsible city, and an innovative city. By recognizing the complexity of urban life rather than merely seeing the city as something to optimize, these Smart Enough Cities successfully incorporate technology into a holistic vision of justice and equity.

A New York Times bestseller: "A passionate and convincing case for the sophistication of nonhuman minds." —Alison Gopnik, *The Atlantic*
Hailed as a classic, *Are We Smart Enough to Know How Smart Animals Are?* explores the oddities and complexities of animal cognition—in crows, dolphins, parrots, sheep, wasps, bats, chimpanzees, and bonobos—to reveal how smart animals really are, and how we've underestimated their abilities for too long. Did you know that octopuses use coconut shells as tools, that elephants classify humans by gender and language, and that there is a young male chimpanzee at Kyoto University whose flash memory puts that of humans to shame? Fascinating, entertaining, and deeply informed, de Waal's landmark work will convince you to rethink everything you thought you knew about animal—and human—intelligence.

The Information Age is OVER -- In business today, it is all about TALENT! "Smart Is Not Enough" explains the core issue of 21st century business. Forget technology - Forget outsourcing TALENT is the #1 challenge in your organization. Whether you're a CEO or an entry level college grad; whether you manage a staff or not, this book is for you. It can help in career planning, in developing your management strategy, or just help you understand the playing field in business today. Author Alan Guarino explains the full gamut of cutting-edge talent management, from how to find it, develop it, deploy it and lead it, to his South Pole Theory of "hidden talent" talent as a solution for the shortage of critical talent in the business world of the 21st Century. The South Pole Theory explains that traditionally, corporations biased their talent searches towards those who performed at the top of their academic classes. Yet, some of the most successful executives and business leaders weren't good students themselves. Grades aren't the only predictor of success in the real business world. This book shares techniques for finding those determined, dedicated go-getters who fall through the cracks when we judge them solely on academics. To compete in business today, top companies need to cultivate every available source of talent. This book shows business leaders how to find and capitalize on this special pool of talent-- the future versions of people like Paul Orfalea, founder of Kinkos, Wayne Huizenga of Blockbuster Video, and many others. Alan Guarino (Marlboro, NY) is CEO and co-founder of the executive search firm Cornell International. His firm is now owned by Adecco, the largest recruiting company in the world.
